MMA equipment

Inverters

Caddy® Arc 151i, A31

Compact and portable inverter for MMA and scratch start TIG welding.

- Durable and impact resistant design with OKC 50 cable connectors.
- Easy to operate. Only current setting needed.
- Automatic hot-start and arc force.
- Can operate with extra long mains cables, over 100 m, thanks to the built in PFC circuit.
- Welds most electrodes from Ø 1.6 - 3.2 mm and some 4 mm electrodes.
- IP 23 – designed for outdoor use making it safe on all work sites

Delivery includes

3 m mains cable with plug, 3 m MMA welding and return cable kit ("screw" type holder).

**Caddy® Arc

Caddy® Arc 151i/201i, A33

Compact and portable inverter for MMA and TIG welding with electronically controlled LiveTig™ start.

- Durable and impact resistant design with OKC 50 cable connectors.
- Easy to operate. Digital display for settings.
- Adjustable hot-start and arc force for accurate weld setting.
- ArcPlus™ II regulator for better welding characteristics. Higher weld quality with less after treatment.
- Two memories for storing of settings.
- Remote control possibility
- Can operate with extra long mains cables, over 100 m.
- Caddy® Arc 151i welds most electrodes from Ø 1.6 - 3.2 mm and some 4 mm electrodes.
- Caddy® Arc 201i welds most electrodes from Ø 1.6 - 4 mm.
- IP 23 – designed for outdoor use making it safe on all work-sites.

Delivery includes

3 m mains cable with plug, 3 m MMA welding and return cable kit ("screw" type holder).

MMA equipment

Inverters

Caddy® Arc 251i, A32/A34

Compact and portable three phase inverter for MMA and TIG welding with electronically controlled LiveTig™ start.

- Durable and impact resistant design with OKC 50 cable connectors.
- Easy to operate. Digital display for settings.
- ArcPlus™ II regulator for better welding characteristics. Higher weld quality with less after treatment.
- Adjustable hot-start and arc force for accurate weld setting (A34).
- Two memories for storing of settings (A34).
- Electrode type selector for optimised performance (A34)
- Remote control possibility
- Can operate with extra long mains cables, over 100 m, thanks to the built in PFC circuit.
- Welds all electrodes from Ø 1.6 - 5 mm; basic, rutile and cellulosic.
- IP 23 – designed for outdoor use making it safe on all work sites

Delivery includes

3 m of mains cable with plug, 3 m MMA welding and return cable kit ("screw" type holder).

Origo™ Arc 4001i, A22/A24

Origo™ Arc 4001i is an ideal partner when it comes to efficient production indoor or outdoor, installation on site or all type of repair & maintenance welding.

The power source is compact and sturdy with a chassis made of galvanized steel. This is a robust material that withstands rough treatment.

You can choose between two control panels, A22/A24, depending upon your requirements and demands.

Delivery includes

5 m mains cable incl plug

Rectifiers

Origo™ Arc 250/300/400

- Low investment cost per Ampere
- No electronics – an advantage for remote operations
- Multi-voltage version available
- Approved according to European standards – CE-marked
- Supplies direct current – welds most materials
- Made to be used with Citoflex cellulosic electrodes
- Designed for use in damp and confined areas – S marked

Delivery includes

Wheels, handle and a 3 m mains cable

Origo™ Arc 410c/650c/810c

The Origo™ Arc 410c, 650c and 810c are sturdy and robust switching converter (chopper) power sources intended for manual heavy duty MMA welding with coated electrodes, TIG welding and Air Carbon Arc Gouging.

Well proven technology with a high level of reliability, outstanding weld performance, a strong metal housing and large wheels for ease of handling, make this range of machines ideal for use in the toughest of industrial environments.

Engine driven welders

Engine driven welders

KHM 190 HS – petrol

A combined engine-driven welding unit and 1ph 230V and 3ph 400V power-generating unit. It allows you to work in environments in which it is difficult or impossible to connect to the mains supply.

Compact and portable, the KHM 190 HS gives you a combination of 190A strong, high-quality DC welding and up to 6kVA of electric power. All in the same unit. The perfect partner for quick repair or assembly work.

The KHM 190 HS has a Honda petrol engine with pull start. Other features include: oil alert engine protection, thermal load and residual current device.

Delivery includes

Wrap-around protection frame.

KHM 190 HS

Setting range, A	20-100, 90-190
Max output at 35% duty cycle, A	190
Max output at 60% duty cycle, A	160
Max output at 100% duty cycle, A	120
Open circuit voltage, V	98
AC Power generation:	
Single Phase, Volts/kVA/Hz	230/5/50
Three Phase, Volts/kVA/Hz	400/6/50
Engine type	Honda GX 390
Sound level, dB(A)/LWA	73/98
Power, kW/rpm	8.4/3000
Weight, kg	115

Welding cable	0700 006 884
Return cable	0700 006 885

KHM 190 YS – diesel

This unit has the same performance as the KHM 190 HS, but it has a diesel engine.

A diesel engine is sometimes preferred as it has a much higher flashpoint than petrol and is thereby much safer in terms of combustibility. Diesel can also be stored a couple of years and still be usable.

Diesel engines consume less fuel, at a lower cost for the same power. Diesel engines are also known to have a longer service life. The disadvantage is the higher weight.

The KHM 190 YS has a Yanmar diesel engine with battery and electrical start. Other features include: battery charge indicator, oil alert engine protection, thermal load and residual current device.

Delivery includes

Wrap-around protection frame and battery.

KHM 190 YS

Setting range, A	20-100, 90-190
Max output at 35% duty cycle, A	190
Max output at 60% duty cycle, A	160
Max output at 100% duty cycle, A	120

Engine driven welders

Engine driven welders

KHM 351 YS

Engine driven welding unit made to weld with coated electrodes. For professional heavy duty repair, maintenance and assembly work.

The wide working range makes it possible to perform a large variety of work in environments where it is difficult, costly or impossible to connect to the mains supply. This thyristor controlled compact and transportable unit gives you a combination of strong, high quality DC current for coated electrode welding (MMA). The same unit also supplies up to 12kVA electric power depending on welding current used.

Delivery includes

Machine complete with engine oil, coolant and charged battery (maintenance free).

KHM 351 YS

Setting range, A	20-350
Max output at 35% duty cycle, A	350
Max output at 60% duty cycle, A	320

KHM 405 YS

Digitally controlled engine driven welding unit made to weld MMA, TIG or MIG/MAG. For professional heavy duty repair, maintenance and assembly work.

The wide working range makes it possible to perform a large variety of work in environments where it is difficult, costly or impossible to connect to the mains supply. This chopper controlled compact and transportable unit gives you a combination of strong, high quality DC current for excellent MMA, TIG or MIG/MAG welding. The same unit also supplies up to 12kVA electric power depending on welding current used.

Delivery includes

Machine complete with engine oil, coolant and charged battery (maintenance free).

Engine driven welders

KHM 525 PS

Digitally controlled engine driven welding/electric power unit made to weld MMA, TIG or MIG/MAG. For the toughest, professional, heavy-duty repair, maintenance and assembly work. For the toughest environments needing high capacity. The wide working range together with the possibility for carbon arc gouging makes it possible to perform a large variety of work in environments where it is difficult or impossible to connect to the mains supply. KHM 525 PS is equipped with a powerful and efficient water-cooled Perkins diesel engine with battery and electric start.

Delivery includes

Machine complete with engine oil, coolant and charged battery (maintenance free).

KHM 525 PS

Setting range, A	10-500
Max output at 35% duty cycle, A	500 (MMA and TIG)

KHM 595 PS

Engine driven welding/electric power units for the toughest, professional, heavy-duty repair, maintenance and assembly work. For the toughest environments needing high capacity. The wide working range together with the possibility for carbon arc gouging makes it possible to perform a large variety of work in environments where it is difficult or impossible to connect to the mains supply. KHM 595 PS is equipped with a powerful and efficient, water-cooled Perkins diesel engine with battery and electric start.

KHM 595 is a full multiprocess equipment which can be used in all processes; MMA, TIG and MIG/MAG. The equipment also has the possibility to give up to 30 kVA electrical power.

Delivery includes

Machine complete with engine oil, coolant and charged battery (maintenance free).

KHM 595 PS

TIG equipment

DC Inverters

Caddy® Tig 1500i/2200i, TA33

Compact and portable inverter for TIG welding, with HF or LiftArc™ start, and MMA.

- Durable and impact resistant design with OKC 50 cable connectors.
- Easy to operate. All basic settings for quality TIG welding available.
- Digital display for settings.
- Plate thickness setting for TIG. Set the plate thickness and the machine will control the welding parameters.
- Adjustable slope down and gas post-flow.
- ArcPlus™ II regulator for better MMA welding characteristics. Higher weld quality with less after treatment.
- Caddy® Tig 1500i welds most electrodes from Ø 1.6 - 3.2 mm and some 4 mm electrodes.
- Caddy® Tig 2200i welds most electrodes from Ø 1.6 - 4 mm.
- Can operate with extra long mains cables, over 100 m.
- IP 23 – designed for outdoor use making it safe on all work sites

Delivery includes

3 m mains cable with plug, 2 m gas hose and two hose clamps.

Caddy® Tig 1500i/2200i, TA34

Compact and portable inverter for advanced TIG welding, with HF or Lift-Arc™ start, and MMA.

- Durable and impact resistant design with OKC 50 cable connectors.
- Easy to operate. Graphical parameter setting for advanced TIG welding.
- Digital display for settings.
- Remote control possibility.
- Pulsed TIG giving increased control of heat input and weld pool.
- Two memories for storing of settings.
- Micro Pulse minimising heat affected zone especially on thin material.
- Adjustable slope up/down and gas post-flow.
- ArcPlus™ II regulator for better MMA welding characteristics. Higher weld quality with less after treatment.
- Caddy® Tig 1500i welds most electrodes from Ø 1.6 - 3.2 mm and some 4 mm electrodes.

TIG equipment

DC Inverters

Origo™ Tig 3001i, TA23

For both industrial use and repair and maintenance applications. The sturdy design makes the Origo™ Tig 3001i suitable for welding anywhere. It is easy to use and reliable in operation. The Origo™ TA23 is a control panel with the basic settings for TIG welding. The panel gives a good overview of all settings, to make operating as quick and efficient as possible. With the Origo™ Tig 3001i you can weld stainless and mild steels, from plate thickness of 1.0 mm.

Delivery includes

5 m mains cable with plug, 2 m gas hose with 2 hose clamps, return cable 4.5 m with clamp.

Origo™ Tig 3001i, TA24

For advanced industrial use and for repair and maintenance. This TIG machine will give a safe start and stable arc. All types of stainless and mild steel and most other materials, from plate thickness of 0.5 mm can be welded with high quality. Productivity with the right quality is important. The control panel Origo™ TA24 has all the necessary functions for advanced TIG DC, Pulse TIG and MMA welding. All parameters presented in an easy to understand way.

Delivery includes

5 m mains cable with plug, 2 m gas hose with 2 hose clamps, return cable 4.5 m with clamp.

TIG equipment

DC Inverters

Aristo® Tig 4000i

Outstanding welding characteristics – high efficiency and high-quality welding.

Efficient Man Machine Communication by the user-friendly control panels Aristo® TA4 and Aristo® TA6.

TA6 enables a memory of 10 welding parameters and the possibility to weld with the pulse technique, which is especially suitable for thin materials.

- Enclosure class IP 23
- Adjustable pre-gas, slope-up, post-gas and slope-down to control starts and avoid cracks and oxidation at the end
- Dust filter to handle tough and dirty environments and avoid grinding-dust and metal particles inside the chassis

Delivery includes

5 m mains cable incl. plug and return cable with clamp

AC/DC Inverters

Caddy® Tig 2200i AC/DC

Compact and portable inverter for AC/DC TIG welding, with HF or LiftArc™ start, and MMA.

- Durable and impact resistant design with OKC 50 cable connectors.
- Easy to operate.
- Digital display for settings.
- Plate thickness setting for TIG (TA33 AC/DC). Set the plate thickness and the machine will control the welding parameters.
- Adjustable slope down and gas post-flow (TA33 AC/DC).
- DC pulsed TIG (TA34 AC/DC) giving increased control of heat input and weld pool.
- Two memories (TA34 AC/DC) for storing of settings.
- Micro Pulse (TA34 AC/DC) minimising heat affected zone especially on thin material.
- Adjustable slope up/down and gas post-flow (TA34 AC/DC).
- Remote control possibility.
- ArcPlus II regulator for better MMA welding characteristics. Higher weld quality with less after treatment.
- All types of material, including aluminium, and thickness up to 5 mm
- Can operate with extra long mains cables, over 100 m, thanks to the built-in PFC circuit.
- IP 23 – designed for outdoor use making it safe on all work sites.

Delivery includes

3 m of mains cable, 2 m of gas hose with two hose clamps. Return cable 3 m incl. earth clamp.

Origo™ Tig 3000i AC/DC, TA24 AC/DC

In both DC and AC mode this TIG welding machine will give an excellent start and stable arc. All types of material and thicknesses can be welded with the highest quality.

- Designed for quality TIG-welding in all types of material.
- QWave™ – enables AC welding with high arc stability and low noise.
- AC frequency and balance control optimizes weld pool.
- DC pulsed TIG welding gives easy control of heat input.
- ESAB 2-program function. Possibility to pre-program and change program during welding.
- Easy to use. All parameters presented in an easily comprehensible way.
- MMA welding: Hot start, arc force and polarity switch.

Delivery includes

Tigaid 315 AC/DC

The Tigaid 315 AC/DC is a useful tool for converting MMA machines, transformers and rectifiers for TIG applications. Tigaid controls the supply of current, HF ignition and gas flow. When stepless and electronically-controlled MMA power sources are used, it is possible to obtain current setting and slope functions.

Torches and components

TXH™ 120, 120V, 120F

The major characteristic for the TXH™ torch program is its quality. The torches and torch outfits are designed to provide the utmost in convenience, versatility and ergonomics.

They are air-cooled, with or without gas valve and with or without a flexible neck. It all depends on the job.

- 120 A torch with start switch – small size and perfect access in confined areas.
- Built-in gas valve for manual control of the shielding gas by hand (120V).
- Flexible heads offer unlimited versatility for reaching hard-to-get-at applications (120F)

TXH™ remote torches

With the TXH™ range with remote it is possible to adjust the welding current during welding and between welds with two buttons in the handle marked with + and -.

A complete solution consists of a TXH™ torch with the +/- buttons and a remote adapter, RA T1, to connect the torch to all ESAB CAN-bus controlled machines. The adapter must only be bought once and all the different torches fit to the same adapter.

MIG/MAG equipment

Compacts, Step controlled

Origo™ Mig C141/C151

The Origo™ Mig C141 and C151 are the ideal welding machines for the less complex welding application, but where a high quality result is of the uppermost importance. Both are step regulated welding power sources with a built-in wire feeder. These low weight units are perfect, practical solutions for farmers, repair shops and light production applications.

Delivery includes

Welding torch MXL™ 150V, 2.5 m (contact tip 0.8), assembled feed roller 0.6-0.8, 3m mains cable with plug, 3m return cable with clamp, gas hose 1.5m, shelf for gas cylinder (for Origo™ Mig C141 - as option) and attachment chain for gas cylinder.

Origo™ Mag C171/C201/C251

The Origo™ Mag C171, C201 and C251 are step controlled welding power sources for MIG/MAG welding. A built-in wire feeder and the low weight of the units make them perfect, practical solutions for use on farms, in repair shops and for light production applications.

Delivery includes

Origo™ Mag C171/C201; MXL™ 200, 3 m (contact tip 0.8), assembled feed roller 0.6-0.8.

Origo™ Mag C251; MXL™ 270, 3 m (contact tip 1.0), assembled feed roller 0.8-1.0.

All units; 3m mains cable with plug, 3m return cable with clamp, gas hose 1.5m, shelf for gas cylinder and attachment chain for gas cylinder.

Origo™ Mig C280 PRO/C340 PRO

The Origo™ Mig C280 PRO/C340 PRO are step-regulated compact power sources for MIG/MAG welding. They are designed for light- to medium-duty applications.

The Origo™ Mig C280 PRO is a 10 voltage-step unit. The operator can adjust wire-feed speed, burnback time and spot-welding time. The Origo™ Mig C340 PRO is a 40 voltage-step unit. The units come with a fitted V/A meter kit. The operator can adjust wire-feed speed and select 2- or 4-stroke control and creep start. Strong, galvanised metal casing and built-in wire feeder make both units practical, mobile solutions.

Delivery includes

PSF™ 250, 3 m (for Origo™ Mig C280 PRO), PSF™ 250, 4.5 m (for Origo™ Mig C280 PRO 4WD), PSF™ 305, 3 m (for Origo™ Mig C340 PRO), PSF™ 305, 4.5 m (for Origo™ Mig C340 PRO 4WD), 5 m mains cable, wheels, 3.5 m return cable (5 m for 4WD) with clamp and shelf for gas cylinder.

Origo™ Mig C420 PRO/C420w PRO

The Origo™ Mig C420 PRO is a step-regulated compact power source for MIG/MAG welding. It is designed for heavy-duty applications.

The Origo™ Mig C420 PRO is a 35 voltage-step unit and three inductance outlets help to select the right arc dynamic setup. The units come with a fitted V/A meter kit.. The operator can adjust wire-feed speed, burnback time and select 2- or 4-stroke control. An optional air filter that keeps metal dust and dirt out of the power source complete the offer.

Delivery includes

Welding torch PSF™ 405/PSF™ 410w 4.5 m, 5 m mains cable with plug, 5 m return cable with clamp, gas hose 1.5 m, shelf for gas cylinder and attachment chain for gas cylinder.

Caddy® Mig C160i

Portable MIG/MAG welding unit with built-in wire feeder for Ø200 mm spools.

Caddy® Mig C160i is used for MIG/MAG welding of mild steels for repair, maintenance and assembly work. This easy to use and powerful unit offers excellent welding properties and is easy to take along to the job at hand. Great if you are welding in the workshop or on the move.

With Caddy® Mig C160i you only need to set the plate thickness before starting to weld. Hotter or colder welds can easily be obtained by using the heat adjustment knob.

Delivery includes

3 m torch, 3 m mains cable with plug, 4.5 m gas hose with hose clamp and quick connector, return cable with clamp, simple shoulder strap, fitted wear parts in torch/feeder for Ø0.8 mm wire. 1 kg OK Autrod 12.51, Ø0.8 mm welding wire is also included.

Caddy® Mig C160i

Caddy® Mig C200i

Portable Mig/Mag welding unit with built-in wire feeder for Ø200 mm spools. For tradesmen – repair, maintenance and assembly welding of mild steels, aluminium and stainless steels as well as brazing. This easy to use, intelligent and powerful unit offers excellent welding properties and is easy to take along to the job at hand. Great if you are welding in the workshop or on the move. Equipped with QSet™ – intelligent setting of welding parameters giving a perfect arc for all material and gas combinations. Single-knob control for consistent and optimal weld quality for all plate thicknesses.

Delivery includes

3 m torch, 3 m mains cable with plug. 4.5 m gas hose with hose clamp and quick connector, return cable with clamp, simple shoulder strap, fitted wear parts in torch/feeder (for 0,8 mm wire). 1 kg OK Autrod 12.51, Ø0.8 mm welding wire is also included.

Origo™ Mig C3000i, MA23A

Origo™ Mig C3000i, MA23A is a compact machine with integrated wire feeder for professional use in general applications up to 300 A. QSet™ is an integrated function in the MA23A panel which provides a unique way of setting welding parameters for short arc. QSet™ is smart - give it a few seconds of test welding and watch how the short arc stabilizes automatically. The optimised setting is maintained regardless of the wire feed speed setting.

Delivery includes

Welding torch PSF™ 305, 4.5 m. 5 m mains cable with plug and 4.5 m return cable with clamp.

MIG/MAG equipment

Compacts Inverters, Semi-automats step controlled

Aristo® Mig C3000i, U6

This is a compact machine with built in wire feeder for professional use in advanced applications up to 300 A. Aristo® Mig C3000i, U6 is ideal for efficient production and pre-fabrication of high alloy materials up to 5 mm thickness in applications with very high demands on welding performance. The Aristo® U6 control panel has synergic MIG/MAG, synergic Pulsed MIG, QSet™ as well as MMA functionality. 10 memories can be stored and setting limits can be programmed to secure the weld quality.

Delivery includes

5 m mains cable with plug and 4.5 m return cable with clamp.

Aristo® Mig C3000i

Mains supply, V/Hz	3~400, 50/60
Max output at 35% duty cycle, A	300/29V

Origo™ Mig L405

The Origo™ Mig L405 welding package is ideal for welding applications within vehicle repair workshops, general steel fabrication, household and furniture manufacturers.

A complete package consists of the Origo™ Mig L405 power source, Origo™ Feed L302 or L304 wire feed units, a connection set and a PSF™ welding torch.

- 40 voltage steps optimum settings for each application.
- Two inductance outlets – easy to optimise settings for different applications.
- V/A meter kit available as option.
- IP 23 – fit for safe outdoor applications.
- Easy-to-use panel for quick set up.

Delivery includes

5 m mains cable, wheels, return cable with clamp, gas bottle platform and a guide pin for the wire feeder.

Origo™ Mig L405

Mains supply, V/Hz	230/400-415/500, 3~ 50; 230/400-460, 3~ 60

MIG/MAG equipment

Semi-automats step controlled

Origo™ Mig 320

The Origo™ Mig 320 is a step-regulated power source for MIG/MAG welding. It is designed for medium-duty applications. It is a 40 voltage-step unit and it has two inductance outlets. The units come with a fitted V/A meter kit. Strong, galvanised metal casing makes this unit the perfect solution for harsh environments. Wide voltage and current range optimise settings for various applications.

The large wheels, sturdy lifting eyelets and an under carriage designed for transportation with fork-lifts make the unit easy to move. The Origo™ Mig 320 operates with the separate wire feeders Origo™ FeedAirmatic, Origo™ Feed 302 M11, 304 M12 and 484 M12 and Origo™ YardFeed 200 (without V/A meter).

Delivery includes

5 m mains cable, wheels, 5 m return cable with clamp, shelf for gas cylinder and a guide pin for the wire feeder.

Origo™ Mig 410/510

The Origo™ Mig 410 and 510 are step-regulated power sources for MIG/MAG welding designed for heavy-duty applications. They are 40 voltage-step units available as water- or air-cooled versions. The Origo™ Mig 410 has two inductance outlets, while the Origo™ Mig 510 has three inductance outlets. The units come with a fitted V/A meter kit. Origo™ Mig 410/510 operate with the separate wire feeders Origo™ FeedAirmatic, Origo™ Feed 302 M11, 304 M12 and 484 M12 and Origo™ YardFeed 200 (without V/A meter).

MIG/MAG equipment

Semi-automats, Choppers

Origo™ Mig 402c/502c/652c

Origo™ Mig 402c/502c/652c are sturdy and robust switching converter (chopper) power sources intended for heavy duty MIG/MAG welding, MMA welding and air-arc gouging. Well proven technology together with ESAB developed software provides high reliability and outstanding welding performance.

Delivery includes

5m mains cable incl plug for 400V, wheels, return cable with clamps, gas bottle platform and a guide pin for the wire feeder.

Origo™ Mig 3001i, A24 – Mig 3001i/3001iw

Origo™ Mig 3001i is an ideal partner when it comes to efficient production or prefabrication of high alloyed materials with a very high demand on the welding performance.

The power source is compact and sturdy with a chassis made of galvanised steel. This is a robust material that withstands rough treatment.

The power source is optimised to operate together with the wire feeders Origo™ Feed 3004/4804, Aristo® Feed 3004/4804 or YardFeed 2000. Connection cables up to 50 m provides a working radius of up to 54.5 meter to suit all your individual welding needs.

Delivery includes

5 m mains cable incl. plug and 4.5 m return cable incl. earth clamp.

Semi-automats, Inverters

Aristo® 300/400/500

The Aristo® 300/400/500 is an inverter-based power source that offers less weight, more power and a high duty cycle.

- Wide mains tolerance of -15/+21% makes it suitable for on-site use and welding in areas with fluctuating mains conditions.
- Saves valuable floor space – 85% smaller than a similarly rated conventional machine.
- 84% lighter than a similarly rated conventional machine.
- Standby function that needs only 30W.
- High impact resistant.
- ELP (ESAB Logic Pump) runs only when water cooling is needed.
- Designed in compliance with ESAB's worldwide ISO 14001 certification.
- Fully RoHS compliant.

Aristo® 300/400/500 CC/CV

The Aristo® 300/400/500 power sources can be outfitted with the CC/CV A44 panel that provides MMA welding in CC mode and with a Mobile Feed 300 AVS connected to that machine MIG/MAG welding becomes possible in CV mode. That is a perfect construction for any work on site as no control cable is needed. A self shielded cored wire makes it independent from shielding gas supply.

The power sources can also operate together with the wire feeders Aristo® F 300. The MA43 or MA44 panel then takes control and disables the A44 panel in the power source.

Semi-automats, Inverters

Aristo® Mig 5000i

- Multi-process power source combining MIG/MAG, pulse MIG, MMA and carbon arc gouging
- Reliable, smooth starts and ends, supported by efficient hot-start and crater-fill functions.
- Efficient man-machine communication by the user-friendly control panels MA4, U6 or Aristo® U8₂
- Wide range of pre-programmed synergic lines for any material or gas combination.
- Memory for 10 (U6) or 255 (Aristo® U8₂) welding parameters.
- ESAB LogicPump, ELP, secures the automatic start of the water pump by connecting a water-cooled welding torch.
- Dust filter to handle tough, dirty environments and avoid grinding-dust and metal particles inside the chassis.
- Operates with the separate wire feeders Aristo® Feed 3004/4804 MA4, U6 and Aristo® U8₂, Aristo® RoboFeed 3004w and Aristo® YardFeed 2000.

Delivery includes

MIG/MAG equipment

Wire feeders

Origo™ FeedAirmatic, M10

- Suitable for Mig 320/410/510/402c/502c and 652c.
 - The push-pull system ensures smooth, problem-free wire feed which is especially important when welding soft aluminium or other thin wires.
 - Permits welding hose packages of up to 16 m
 - Extended working radius with connection cables of up to 35 m
 - Digital V/A meters (option)
 - TrueArcVoltage System, measures the correct arc voltage value independent of the length of the connection cable, return cable or welding hose package
 - Extra versatility can be achieved by attaching a counterbalance device, wheel kit and hanging bracket.
 - Enclosed wire spool keeps the wire clean.
- Allen key, hose clamp and five inlet nozzles for PKB included.

MIG/MAG equipment

Wire feeders

Origo™ Feed 3004/4804, MA23/MA24

The sturdy design of the ESAB Origo™ Feed 3004 and 4804, with their galvanised metal casing, makes these units ideal for use in tough environments. Suitable for Mig 3001i/4001i/5000i/4002c/5002c/6502c. Electronically controlled feeding gives an accurate and stable arc and the 4-wheel feeder mechanism with grooves in both the feed roll and pressure roll gives a stable feed with low wear on the wire, all of which helps to avoid operational disturbances.

Aristo® F 300

Aristo® F 300 comes with new benefits that make welding with Aristo® 300/400/500 more enjoyable.

2 alternative control panels are available: MA43 and MA44.

Easy to understand and operate and easy to upgrade.

The advanced MA44 panel features QSet™ - artificial intelligence for your welding application. QSet™ automatically adjusts optimal parameters in short arc welding.

The 4 wheel drive system with one balance beam pressure arm makes tension adjustment easy and is the only solution that distributes the force absolutely equally. The standard heavy duty 40 mm feed rolls with ball bearings run wires up to 2.4 mm and are brought to you for less maintenance and longer life time.

Aristo® F 300 can be used both with Marathon Pac™ and wire spools.

Wire feeders

Aristo® Feed 3004/4804, U6/U8₂

- Suitable for Mig 3001i/4001i/U4000i/5000i/U5000i/4002c/5002c and 6502c.
- 2/4 stroke, simplifies handling of the welding torch.
- Creep start, gas pre-flow and hot start provide a soft, more direct start with less spatter.
- Crater filling, adjustable burn-back time and post gas provides a smooth finish, extend the service life of the contact tip and guarantee no cracks at the end.
- Pre-programmed synergic lines, to ensure optimal settings.
- Possibility to create synergic lines (Aristo® U8₂).
- Memory for 10 (U6) or 255 (U8₂) parameter sets
- Quick connectors – shortest possible set-up times.
- ESAB LogicPump ELP, secures the automatic start of the water pump by connecting a water-cooled welding torch.
- TrueArcVoltage System™, measures the correct arc voltage value, independent of the length of the connection cable, return cable or welding torch.

MobileFeed 200AVS / 300AVS

Built for harsh environments such as construction sites, pipe lines, shipyards, offshore, general fabrication, mobile welding rigs and more.

- Arc voltage feeder for use with DC, (CC or CV) power supplies
- Totally enclosed, super impact-resistant case
- Metal reinforced, flame retardant, molded composite plastic case
- 4 roll drive unit with tach feedback for superior wire feeding
- Permanent magnet drive motor with PWM drive, solid state controlled wire acceleration for smooth arc starts and spatter-free operation
- Electronic Dynamic Braking
- Automatic slow wire run-in for improved arc starts.

Origo™ YardFeed 200, M13y

- Suitable for Mig 320/410/510 (without V/A meter) /402c/502c and 652c (with V/A meter).
- 2/4 stroke, simplifies handling of the welding torch.
- Safety switch with optional heating element.
- Gas purge and wire inching.
- Manual gas flow valve inside the cabinet.
- Gas flow manometer incl. manual valve (option).
- High strength steel to make the feeder light and robust especially resistant against rough handling.
- Integrated handle in a protective frame simplifies the handling through man-holes and other difficult-to-access areas.
- Equipped with military standard control cable connector.
- Adjustable burn-back timer provides a smooth finish and extends the lifetime of the contact tip.
- Quick connectors- shortest possible set-up times.
- ESAB LogicPump, ELP, secures automatic start of water pump by connection of a water cooled welding torch.
- TrueArcVoltage System™, measures the correct arc voltage value independent of the length of the connection cable, return cable or welding torch.

WeldPoint™

WeldPoint™ is a PC based tool to handle a multitude of administration and monitoring tasks for ESAB welding systems connected to a Local Area Network (LAN) by a TCP/IP address. WeldPoint™ also enables data to be uploaded or downloaded to or from the computer by a USB memory stick as an alternative for applications that do not require the continuous communication possibilities presented by LAN connection.

Views

WeldPoint™ consists of 7 views. Each view is responsible for particular tasks.

Main view is responsible for establishing connection(s) with the welding system (weld data unit's).

Get files from weld data unit downloads the files from the welding system.

View weld data helps the user to view the content of the weld data file.

Compose new weld data is used to combine two weld data's to create a new weld data.

Online quality data viewer helps the user to receive quality data in real-time.

Online weld data editor supports editing of setting data online.

Remote USB-memory access supports up and downloading of files to/from the connected weld data unit.

The feeder unit can be rotated on the power source through 360°.

Ordering information

Turning piece for Aristo® Feed and Origo™ Feed MPac versions 0458 703 880

Wheel kit

Increases the working radius from the power source. The wheel kit has four wheels and can also be placed to pivot on the power source.

Ordering information

Wheel kit 1 Feed L302/L304/302/304/3004/484/4804. Front wheels turnable. 0458 707 880
Wheel kit 2 Feed L302/L304/302/304/3004/484/4804. All wheels turnable. 0458 707 881

Lifting eye

Using this device, the feeder unit can be suspended in a swinging arm.

Ordering information

Lifting eye for Aristo® Feed/Origo™ Feed/Origo™ Feed L302/304 and Aristo®/Origo™ Feed L3004 0458 706 880

Strain relief for welding torch

Recommended in combination with wheel kit.

Ordering information

Strain relief for Aristo® Feed/Origo™ Feed, Aristo® Feed L3004/Origo™ Feed L3004 and Aristo® YardFeed 2000/Origo™ YardFeed 200 0457 341 881

Torches and components

MXL™ Torches

- 4 gas-cooled welding torches.
- Ergonomic handles.
- Optimum cooling of torches, extended service life for swan necks and wear parts.
- Spring-loaded contact pins in the central connector.
- Hose length 3 and 4 m.
- Gas nozzles in 3 different versions; standard, straight and conical, provide maximum flexibility and an optimum service life.

PSF™ self-cooled

There are four different types of self-cooled PSF™ welding torches and they can be ordered with two different hose lengths. The handles are ergonomically curved. A range of different angled swan necks provides easy access to all the different welding positions and a comfortable working position. PSF™ 405 is available with a built-in, three-step, remote-control switch (RS3).

Torches and components

PSF™ water-cooled

The water-cooled PSF™ torches are probably the coolest welding torches on the market. The excellent cooling allows for a smaller swan neck with no reduction in current capacity, plus reduced wear part consumption. A swivel at the back of the handle reduces strain on the welder's wrist. Together with the opportunity to use different angled swan necks, this provides easy access to all welding positions and a comfortable working position.

Both torches are available with a built-in, three-step, remote-control switch (RS3).

PSF™ Centrovac self-cooled

The Centrovac welding torches have integrated smoke extraction, providing a smoke-free working environment for the welder. The handles are ergonomically designed and incorporate a reduction valve for suction adjustment. The PSF™ 250C and 315CLD have a small handle, providing easy access to all the different welding positions. PSF™ 405C has a swivel at the back of the handle to reduce the strain on the welder's wrist.

PSF™ 315M

Welding torch for MIG/MAG welding in mechanised applications.

- Straight or precision bent 25° swan neck – easy to change gun without recalibrating.
- Liners with controlled flexibility in both steel and PTFE – for stable wire feeding.
- Connection for pneumatic spatter cleaning.
- Contact tip protrudes 3 mm to increase accessibility.
- Spatter protection – high temperature resistance and prevents welding spatter from penetrating the swan neck.

PKB™ 250/400

The pneumatic A9A is a push-pull system consisting of PKB™ 250 and 400, Origo™ FeedAirmatic wire feeder and welding hoses of different lengths and dimensions. The torch is powered by air and the feed speed is set steplessly by a knob on the torch. The trigger permits creep starts and speed reductions during welding. The hose connection supplies current, wire, shielding gas and air in the same connection.

MXH™ 300/400w PP

MXH™ 300/400w PP are electric push-pull welding torches.

- Air- and water-cooled pistol grip torches with straight and curved 45 degree swan necks.
- Allows 360 degree rotation of the curved swan neck to suit various welding positions.
- Couples with ESAB feeding mechanisms to produce a high performance push-pull feeding system.
- Ideal for feeding aluminium and other small diameter wires long distances.
- Wire feed speed controlled by a potentiometer located on the torch handle.

Ancillary equipment

Remote controls

Remote control MMA 1

The remote control MMA 1 is equipped with one knob, giving the welder the opportunity to steplessly adjust the current. It comes with a 10-metre rubber cable with a 12-pole plug (Type C) and a metal hook for easy handling when not welding.

Ordering information

Remote-control MMA 1, 12 p, (Type C)

0349 501 024

Remote control MMA 2

The remote control MMA 2 is equipped with two knobs, giving the welder the opportunity to make both rough and fine current settings. It comes with a 10-metre rubber cable with a 12-pole plug (Type C) and a metal hook for easy handling when not welding.

Ordering information

Remote-control MMA 2, 12 p, (Type C)

0349 501 025

Remote control MIG 2

The remote control MIG 2 is equipped with a 23-pole plug (Type D) and is suitable for MIG/MAG machines. With this remote, it is possible to set both wire feed speed and voltage. It comes with a five-metre rubber cable and a metal hook for easy handling when not welding.

Ordering information

Remote-control MIG 2, 23 p, (Type D)

0349 501 028

Transmitter NO2

Transmitter NO2 is an alternative, wireless remote control system for Arc 410c/650c/810c, A12 and LHF 405/615 PIPEWELD welders.

Quick guide

Control panel functions

M11/M12

- Adjustable burn-back timer
- Creep start
- 2/4 stroke
- Wire feed speed
1.9-20 m/min (M11)
1.9–25 m/min (M12)

MA23

- CC/CV
- Digital V/A meter
- 3 memories
- 2/4 stroke
- Step-less inductance setting
- Gas purge and wire inching
- Remote control

M13

- Additional functions to M12
- Crater filling
- Voltage setting

M13 V/A

- Additional functions to M13
- * Digital V/A meter

MA24

- MMA and MIG/MAG
- Synergic MIG/MAG
- QSet™
- Creep start
- Crater fill
- 2/4 stroke
- Panel or Remote operation
- Gas purge/wire inching
- Digital V/A meter
- Stepless inductance setting
- 3 memories

A13

- MIG/MAG- All functions controlled from the feeder panel
- MMA
- Air Carbon Arc Gouging
- TIG
- Digital V/A meter

A32

- MMA or TIG (with LiveTig™ start)
- Remote control (analogue) or panel choice
- Digital display
- Current setting

A22

- MMA or TIG (LiveTig™ start)
- Current
- Digital V/A-meter
- Panel or Remote operation
- VRD indicator

A33

- MMA or TIG (with LiveTig™ start)
- Remote control function (analogue)
- Current setting
- Adjustable Hot start
- Adjustable Arc force
- Two memory positions
- Digital display

A24

- MMA, MIG/MAG (CV-mode) or TIG (LiveTIG start)
- Electrode type
- Current
- Digital V/A meter
- Hot start MMA
- Arc Force
- Stepless Inductance (CV-mode)
- Two memories
- Panel or Remote operation
- VRD indicator

A34

- MMA or TIG (with LiveTig™ start)
- Current setting
- Electrode type selection
- Remote control (analogue) or panel choice
- Adjustable Hot start
- Adjustable Arc force
- Two memory positions
- Digital display

TA4

- TIG/MMA
- MMA arc force, hot start
- Gas pre/post flow
- Slope up/down
- HF/Lift Arc
- 2/4 stroke
- Display measurement V/A

TA23

- Slope up
- Welding current
- Slope down
- Gas post flow time
- Welding method TIG/MMA
- HF/LiftArc start
- 2/4 stroke
- Panel/remote control
- Digital display

Quick guide

Control panel functions

TA24

Additional functions to TA23:

- Pulse TIG (DC)
- Pulse current
- Pulse time
- Background current
- Background time
- 2 memory positions

TA33 AC/DC

- Digital display
- Welding method TIG/MMA
- Welding processes
- TIG: AC/DC-
- MMA: DC/DC-/AC
- HF/LiftArc start
- 2/4 stroke
- Panel/remote
- Plate thickness setting
- Slope down
- Gas postflow time

TA24 AC/DC

Additional functions to TA24:

- AC TIG welding
- AC balance
- AC frequency
- Electrode preheating

TA34 AC/DC

- Welding method TIG/Pulse TIG/MMA
- Welding processes
- TIG: AC/DC-/DC Pulse
- MMA: DC/DC-/AC
- HF/LiftArc start
- 2/4 stroke
- Panel/remote/memory selection
- 2 memory positions
- Slope up/down
- Welding current
- Pulse time
- Background current and time
- Gas post flow time
- AC balance and frequency
- Electrode preheating

U6

Additional functions to TA6:

- MIG/MAG
- Voltage
- Wire feed speed
- Burnback timer
- Inductance, stepless
- Crater filling
- Creep start
- Synergic MIG/MAG
- Synergic pulse MIG
- Hot start MIG
- Wire inching
- QSet™

Aristo® U82

Aristo® U82 is a complete, fully equipped programming unit as well as a user friendly control pendant for Feed 3004/4804.

TA6

Additional functions to TA4:

- MMA: electrode type
- Gas purge
- Pulse TIG (DC)
- 10 memory positions
- Multi language

MA43

- MIG/MAG and MMA
- 2/4 stroke
- Stepless inductance setting
- Gas purge/wire inching
- Digital meter
- 3 memories
- Panel or Remote operation

TA33

- Digital display
- Welding method TIG/MMA
- HF/LiftArc™ start
- 2/4 stroke
- Plate thickness setting
- Slope down
- Gas postflow time

MA44

- MIG/MAG and MMA
- Synergic MIG/MAG
- QSet™
- Creep start
- Crater fill
- 2/4 stroke
- Stepless inductance setting
- Gas purge/wire inching
- Digital meter
- 3 memories
- Panel or Remote operation

TA34

Additional functions to TA33 (Plate thickness setting not included)

- Welding method TIG/Pulse TIG/MMA
- Panel/remote/memory selection
- 2 memory positions
- Welding current
- Pulse time
- Background current
- Background time
- Slope up/down
- Gas postflow time

A44

- MMA (CC), MIG/MAG (CV) or TIG (LiveTig™ start)
- Electrode type
- Current
- Hot Start / Arc Force (MMA)
- Stepless Inductance (CV)
- Digital meter
- 2 memories
- Panel or Remote operation
- VRD indicator

Ancillary equipment

Cooling units

CoolMini

Cooling unit suitable for TIG torches. Working together with Tig 2200i and 2200i AC/DC.

CoolMini

Mains supply, V/Hz from power source	230, 1~ 50/60
Cooling water, l/min	2
Coolant volume, l	2.2
Cooling capacity, W/l/min	700/1.0
Max water pressure, bar	2.3
External dimensions, LxWxH, mm	407x187x137
Weight, kg	4.5/6.7

Handle incl. mounting screws for separate installation (Complete set = 2)	0459 307 881

FeedSelector

FeedSelector is a switch unit for connecting two wire feeders to one welding rectifier. Can be used when welding with two different electrode wires and one or two shielding gases are required. The FeedSelector switches the welding current and the required control circuits between the wire feeders. FeedSelector is an excellent partner for Origo™ Mig 400t/tw, 500t/tw, 630t/tw, 410/w, 510/w, 402c/cw, 502c/cw, 652c/cw.

Delivery includes:

FeedSelector, assembly elements, instruction manual.

FeedSelector	
Mains supply, V/Hz	42, 50/60

Manual plasma cutting equipment

Plasma cutting packages

Origo™ Cut 36i

Origo™ Cut 36i is a small and portable, single phase 230 V/ 17A, plasma cutting package. Perfect for repair and maintenance. Cuts all metals, including copper and aluminium. Mild steels up to 12 mm can be separated. Few settings makes it easy to use. Just add electricity and compressed air. The powerful HF start goes straight through a drawing, placed or glued on top of the plate – cuts the exact part you need. Full Compliance with Harmonics Regulations IEC61000-3-12(2006-08)

Delivery includes

Origo™ Cut 36i, 4.5 m PT 31XL torch, 5 m return lead, 2.5 m mains cable with Schuko plug, carrying strap and wear part kit

Origo™ Cut 36i

Mains supply, V/Hz	230, 50/60

PowerCut™ 900

PowerCut™ 900 is made for all types of cutting within production, repair, maintenance and assembly. Use on all electrically conductive materials, e.g. mild steels, aluminium and stainless steels.

This rugged, easy to use, power efficient unit offers excellent cutting, piercing and gouging properties. It can also be adapted for mechanization.

Delivery includes

7.6 m PT38 torch, 3 m mains cable, gas hose with quick connector, return cable with clamp, wear parts kit and torch wrap fitted.

PowerCut™ 1600

Powerful plasma cutting package for cutting up to 38 mm material thicknesses.

For all types of heavy duty cutting and gouging within production, repair, maintenance and assembly. Use on all electrically conductive materials, e.g. mild steels, aluminium and stainless steels.

This rugged, easy to use, power efficient unit offers excellent cutting, piercing and gouging properties. It can also be adapted for mechanization. Runs off your mains supply together with compressed air or Nitrogen.

Delivery includes

7.6 m PT38 torch, 3 m mains cable, gas hose with quick connector, return cable with clamp, wear parts kit and torch wrap fitted.

Plasma cutting packages

ESP 150

This heavy-duty, water-cooled plasma cutting and gouging system provides the perfect solution for production cutting and plasma gouging.

The ESP 150 can cut up to 51 mm manually and can sever 63 mm, using either an Ar/H₂ mixture or compressed air. Gas options for higher quality cuts, especially on aluminium and stainless, resulting in lower total operating costs – the PT 26 torch cuts with nitrogen or argon-hydrogen mixtures; choice of carbon dioxide, air, nitrogen or oxygen for torch cooling.

Delivery includes

The ESP 150 package includes a 7.6 m leather protected PT 26 torch, torch wear part kit, 7.6 m work cable, dual cylinder rack/wheel kit, regulators/filters, torch hooks, torch coolant and gas hose.

Plasma torches

Plasma gouging

Plasma gouging is an effective way of removing material, when preparing for the next layer to be welded or for removing faults. Generally speaking, the advantages of using plasma instead of carbon rods are 50% less noise, 50% fewer particles in the air, 50% less energy consumed, no carbon deposits in the material and the fact that gouging can be performed on all materials (even high-alloyed

and aluminium).

Only two parts need to be changed (no tools needed) to gouge instead of cut – the nozzle and an additional metal gouging heat shield.

PT 31XL

The PT 31XL is the smallest 50 A plasma cutting torch on the market. Designed for superior operator comfort. Rated at 50 A in continuous operation. Specially designed to make it easy to access places that are difficult to reach. For drag cutting with HF starts.

PT31XL is used on CaddyCut, Handy-Plasma 50 and PCM 500i.

PT31XLPC is a PT31XL with torch connections for PC650.

Orbital TIG welding

Welding heads orbital TIG

Introduction Orbital TIG

New and improved metal qualities, rising material and labour costs, but also more sensitive materials, and continuously increasing demands on quality and productivity are factors which you have to deal with daily.

ESAB helps you to get ahead and stay ahead. Our metallurgists, chemists, engineers, technicians and skilled welders have one dedication: to find better materials and develop better equipment for your welding.

The ESAB welding program for mechanised tube welding is based on the TIG welding method with a non-consumable tungsten electrode.

To further improve weld quality and decrease costs, ESAB have developed micro-processor controlled power sources for orbital TIG welding, the Aristo® MechTig C2002i, MechTig 3000i and MechTig 4000iw with control boxes Aristo® MechControl 2 and 4. A21 is ESAB's welding head for tube-to-tube welding, A22 is a welding head for tube-to-tube sheet welding and A25 is a modular component system for orbital TIG welding.

If you need other equipment than what is shown in the catalogue, please contact your nearest ESAB representative.

A21 PRB

The PRB welding head is compact and easy to use as a result of its unique pincer action which reduces setting-up times to a minimum. The welding head is positioned and secured around the tube with great accuracy in seconds. The PRB welding heads are available in three sizes for tubes with outer diameters of 17 to 170 mm.

Use these welding heads together with the Aristo® MechTig power sources.

Delivery includes

7 m of connection cable (current, gas, water).

	PRB 17-49	PRB 33-90	PRB 60-170

Wire holder complete with gas lens diameter 24 mm with adjustable wire nozzle for PRB/PRC 33-170	0443 923 880

Orbital TIG welding

Welding heads orbital TIG

A21 PRC

The PRC welding head is a further development of our PRB welding head. The PRC features a zig-zag weaving movement and arc voltage control, which produces higher productivity and better welding quality, particularly when welding thick-walled tubes. These welding heads are used together with the Aristo® MechTig power sources.

Delivery includes

7 m of connection cable (current, gas, water).

	PRC 17-49	PRC 33-90	PRC 60-170

A21 PRD 100

The PRD 100 welding head is designed for precision, quality and technology of the highest class. It is a TIG welding head for tubes with an outer diameter of 100 mm and upwards. The PRD 100 is very compact in design and, as a result of its low profile, requires only 73 mm of clearance around the tube. The welding head is water-cooled and designed for amperage of up to 400 A. The mechanical settings are easy, all the welding parameters are incorporated in the procedure program which are controlled by a microprocessor system. Use this welding head together with the Aristo® MechTig power sources.

Delivery includes

8 m of connection cable (current, gas, water) and motor cable.

	PRD 100
Rotation speed, cm/min	2-40
Tube diameters OD, mm	100 to flat
Electrode diameter, mm	1.0-4.0

Orbital TIG welding

Welding heads orbital TIG

A21 PRD 160

The PRD 160 is a water-cooled flexible pipe-welding head, for pipes with an outer diameter of 160 mm and upwards. The PRD consists of an articulated carriage that travels around the pipe on a rack that is adapted to match the diameter of the pipe. To ensure maximum flexibility, the welding head is built in modules. The basic unit, for thin-walled pipes, includes only one motor, for travel. Depending on the application, it is possible to add wire-feed-, arc voltage control- and weaving-modules for the thicker wall applications.

PRD 160 can be used together with the Aristo® MechTig power sources.

Delivery includes

8 m of connection cable (current, gas, water) and motor cable.

A21 PRH

ESAB's PRH tube-welding tool is designed for welding thin-walled, stainless steel tubes in order to provide maximum gas shielding around the tube. The tool has been designed according to the chamber principle to produce this shield. This means that the rotating part and the Tungsten electrodes are enclosed in a gas chamber formed by the outer casing, which also constitutes the clamping arrangement for the tube to be welded.

The tube-welding tool is water-cooled and forms a complete unit which also incorporates the return conductor. It is available in three sizes, PRH 3-12, PRH 3-38 and PRH 6-76, making it possible to weld tubes of between 3 mm and 76.2 mm.

All three heads are equipped with encoder motors for precise positioning of each sector when welding with different sets of parameters.

Delivery includes

8 m of connection cable (current, gas, water and return).

	PRH 3-12	PRH 3-38	PRH 6-76
Max output at 100% duty cycle, A	15	50	60

Orbital TIG welding

Welding heads orbital TIG

A22 POC

The POC 12-60 is a welding head for tube-to-tube sheet TIG welding. It is a precision-built, robust and versatile welding head which can be used for all types of tube-to-tube-sheet welding. The POC has a working range of 12 to 60 (93) mm outer tube diameter. The centering accuracy of the POC is very high and centering mandrels are available for inner tube diameters from 10.0 mm.

POC can be used together with the Aristo® MechTig power sources.

Delivery includes

8 m of connection cable (current, gas, water).

POC

Rate of rotation, rpm	0.2-4.5

Orbital TIG welding

A25 modular components

A25

A25 is a modular component system – the key to TIG welding mechanisation. The modular components can easily be put together to create a system to suit your requirements. The TIG-narrow gap method can also be used together with the A25 system. Narrow gap with an extremely small joint angle and resulting in low joint volume.

The A25 modular system is used together with the Aristo® MechTig power sources.

Narrow gap head for PRD

ESAB have developed equipment for Narrow Gap welding together with the PRD welding head. The TIG Narrow Gap Orbital Welding has an extremely narrow groove with a subsequent small joint volume. Welding in all positions is possible. Stainless and carbon steel can be welded.

Balancing block

The balancing block is capable of carrying welding heads, drilling and grinding machines weighing 5.5-9 kg. The wire can be extended to a maximum length of 2.7 metre. The spring force is constant, i.e. the wire has the same lifting capacity irrespective of the length to which it has been extended.

Ordering information

Orbital TIG welding

Ancillary equipment

MEI 21 wire feed unit

The MEI 21 is a wire feed unit with four wheel drive for orbital TIG welding. A separate wire feed unit is a great advantage since it eliminates the need for a wire feed unit and wire spool mounted on the welding head. 5 kg wire spools can be used. The MEI 21 can be used for wire dimensions from 0.6 mm to 0.8 mm and can be used together with the Aristo® MechTig power sources.

Delivery includes

The MEI 21 wire feed unit is delivered with a wire hose.

MEI 21	
Wire diameter, mm	0.6-0.8
Wire feed, m/min	0.1-2.6
Max spool dimension/weight, Ø mm/kg	200/5
Hub width, mm	60
Hub hole diameter, mm	51.5
Wire guide length, m	4.2
Weight, kg	4

Ordering information

MEI 21 0443 830 880

MEI 10 wire feed unit

The MEI 10 is a wire feed unit developed for mounting on PRB/ PRC 17-170 tools (PRC 17-49 only with AVC). PRB/PRC tools with MEI 10 can be used together with the Aristo® MechTig power sources.

The increase in size of the tool when it is mounted, is kept to a minimum due to the compact design of the wire feed unit.

Thanks to the very short distance the wire needs to be fed, from the reel to the molten pool, the MEI 10 is ideal for aluminium welding. It is naturally also possible to use the wire-feed unit for mild and stainless steel welding.

The MEI 10 weighs only 0.5 kg (without bobbin and cable) and it can be used for wire dimensions of 0.8 mm to 1.0 mm for aluminium and 0.8 mm for steel. A geared DC motor drives the feed roller via gear wheels. The motor is equipped with a pulse generator which enables the precise adjustment of the wire feed speed.

MEI 10	
Wire diameter, mm	0.8 (steel)
Wire feed, m/min	0.1-1.2
Max spool dimension/weight, Ø mm/kg	60/0.26
Wire guide length, m	0.1
Weight, kg	0.5 (excl bobbin)

Orbital TIG welding

Power sources orbital TIG

Aristo® MechTig C2002i

Aristo® MechTig C2002i is a small and compact orbital welding power source with integrated water cooler which together with the excellent tube welding heads provides high quality and productivity. The machine is equipped with a 10 inch colour monitor and the interface is windows like. For control of the welding settings you can either use a graphical interface to control all necessary parameters or a spread sheet where you can see all parameters. The Aristo® MechTig C2002i is delivered with a ready library where you can find a number of pre-defined programs that you can use for fast and easy set-up. There is also a function for auto generation of programs. This function creates a start program, the only thing you need to do is to key in some basic parameters as material, outer diameter and the thickness of the pipe. The welding program can then be stored in the program library. Aristo® MechTig C2002i can be used together with the welding heads PRB, PRD 160 with wire feed unit, PRH, POC, wire feed units MEI 10, MEI 21 and A25 component system with manual/floating slides.

Welding automation

Mechanisation equipment

Railtrac 1000

Railtrac 1000 is a series of programmable and portable equipment for mechanising welding and cutting. Different solutions often provide the answer to monotonous, gruelling work and produce higher productivity and more consistent quality at the same time. Railtrac is specially designed for MIG/MAG and TIG welding and thermal cutting.

Railtrac is made up of robust components and is available in the following four basic models. All the models have five different programs, including interval welding. The rail can be fixed in place using suction cups of the ejector type, screw attachments or permanent magnets.

- Railtrac F1000, Flexi, the least complex equipment for welding or cutting along a combi-rail, either flexible or stiffened.
- Railtrac FW1000, Flexi Weaver, the Flexi system plus a remote-control unit and a weaving device which makes it possible to weave the arc according to different patterns.
- Railtrac FR1000, Flexi Return, has the combi-rail. It also has movable start and stop indicators for automatic operation.
- Railtrac FWR1000, Flexi Weaver Return, also has the flexible combi-rail, a remote-control unit, a weaving device and start and stop indicators for automatic operation.

Using the remote control, it is possible to select:

- Start and stop
- Travel or welding direction/cutting direction
- Travel or welding speed/cutting speed
- Weaving width
- Zero-line displacement
- Rapid speed on/off
- Backfill function
- Potentiometer control of welding parameters

Railtrac 1000

Rail length, m	2.5
Rail bending radius, min, mm	1000
Welding speed, m/min	0.10-1.5
Transport speed, m/min	1.5
Weaving range, mm	1-30
Weaving speed, mm/s	6-60
Dwell time, s	0.0-9.9

Welding automation

Mechanisation equipment

Railtrac F1000

Railtrac F1000, Flexi, for welding and thermal cutting.

- Welds and cuts in all positions on magnetic and non-magnetic materials
- Quick assembly and easy operation
- Programmable with five programs
- Calibrated setting values in cm, mm and sec
- Programmable "backfill" for crater filling
- Self-instructive programming manual
- Stiff or flexible, robust rail made of standard aluminium profiles without racks
- Track which can be extended or cut to required length
- Angled attachment for quick adjustment of pistol angle (option)
- "Floating" head for mechanical height maintenance (option)

Railtrac FR1000

Railtrac FR1000, Flexi Return, for welding and cutting with automatic return.

- Welds and cuts in all positions on magnetic and non-magnetic materials
- Quick set-up and easy operation
- Programmable with five programs
- Calibrated setting values in mm, cm and sec
- Programmable "backfill" for crater filling
- Self-instructive programming manual
- Stiff or flexible rail made of standard aluminium profiles without racks
- Rail which can be extended bent or cut
- Angle bracket for quick adjustment of torch angle (option)
- "Floating" head for mechanical height maintenance (option)

Railtrac FWR1000

Railtrac FWR1000, Flexi Weaver Return, for oscillated welding with automatic return.

- Welds in all positions on magnetic and non-magnetic materials
- Quick set-up and easy operation
- Programmable with five programs
- Calibrated setting values in mm, cm and sec
- Programmable "backfill" for crater filling
- Self-instructive programming manual
- Flexible rail made of standard aluminium profiles without racks
- Rail which can be extended or cut to required length
- Angle bracket for quick adjustment of torch angle (option)
- Tilttable weaving unit for fillet welds (option)
- Turnable weaving unit for horizontal weaving in sloping joints (option)
- "Floating" head for mechanical height maintenance (option)
- Potentiometers in the remote control for parameter adjustments

Railtrac FW1000/FW1000 L

Railtrac FW1000, Flexi Weaver, for oscillated welding. The Railtrac FW1000 can be delivered in a "FW1000 L" version if the welding process need to be done with a lower welding speed than with FW1000.

- Welds and cuts in all positions on magnetic and non-magnetic materials
- Quick set-up and easy operation
- Programmable with five programs
- Calibrated setting values in cm, mm and sec
- Self-instructive programming manual
- Resilient remote control with profiled membrane buttons
- Stiff or flexible rail made of standard aluminium profiles without racks
- Rail which can be extended or cut to required length
- Angle bracket for quick adjustment of torch angle (option)
- Tilttable weaving unit for fillet welds (option)
- Turnable weaving unit for horizontal weaving in sloping joints (option)
- "Floating" head for mechanical height maintenance (option)
- Potentiometers in the remote control for parameter adjustments

Welding automation

Mechanisation equipment

Railtrac BV1000/BVR1000

Railtrac BV1000 and BVR1000 are two automatic units for mechanising the repair and hardfacing of rail profiles smoothly and efficiently. The equipment can be assembled, programmed and controlled quickly and easily by one person. Learning to use it is easy and handling is extremely fast.

The system comprises two rail fasteners, a stable aluminium profile, a carriage with a weaving unit, control electronics and remote control. The weaving unit and control electronics are fully synchronised to enable a number of weaving patterns to be pre-programmed.

The weaving movements start from a laterally adjustable zero line, either the outer side or the inner side of the rail. This zero line can also be moved laterally during welding. Different speeds can be used in each program to produce the most consistent weld metal thickness possible.

The remote control unit enables the welder to have full control of all the movements of the machine without lifting his/her welding visor.

Railtrac BV1000, with a weaving device and four different programs.

Railtrac BVR1000, with a weaving device, start and stop indicators, return function for automatic operation and six different programs.

Tramtrac™ II

Tramtrac™ II is a light weight tractor for repairing worn city tram rails. It has a wire feed unit and controls for travel speed, wire feed speed, inching and start/stop of the welding process.

The best way to get most out of your Tramtrac™ II is to use it together with either OK Tubrodur 14.71 or OK Tubrodur 15.65. Both are self shielded wires needing no shielding gas and the best power source to use is the Origo™ Mig 410.

Mechanisation equipment

Frametrac™

The Frametrac™ is a superb alternative when you wish to automate your frame welding. It is built for use together with ESAB's semi-automatic power sources and feed units.

The Frametrac™ is a compact, motor-powered tractor that travels on the door frame to be welded. The four driving wheels guarantee an even, stable movement on the frame.

A standard ESAB torch can be mounted in the torch attachment and can be adjusted to fit your frame and type of welding.

From the control box and from the remote control you can control travel direction and speed, weaving speed and width. To secure best possible arc stability, Frametrac™ is equipped with an automatic current control, ACC, that holds the arc length stable.

Railtrac Orbital W

The Railtrac Orbital W is a superb alternative if you wish to automate your tube welding. It is ideal for use with ESAB's semi-automatic power sources and feed units.

The Railtrac Orbital W is a small, compact, motor powered tractor to which a standard ESAB welding torch can be attached quickly. Two motors guarantee an even, stable movement on the rail.

Railtrac Orbital W

Miggytrac 1001

The Miggytrac 1001 is a small and compact, motor-powered tractor to which a standard ESAB welding torch can be quickly attached.

The four driving wheels, together with the magnet which is fitted on the tractor, guarantee even, stable movement. The magnet holds the tractor in the correct position on the workpiece, even if it is bent or angled. The tractor functions as a straightforward remote control for the feed unit; you decide on the travel direction and then start and stop welding from the panel. The panel features additional functions such as travel speed settings, wire feed, voltage and welding on/off. The tractor follows the joint using guide wheels.

Miggytrac 1001

Tractor automats

Miggytrac 2000

The Miggytrac 2000 is a small, compact, motor-operated trolley that is designed for the mechanisation of GMAW, gas metal arc welding, in particular. Just fix the torch in the holder and Miggytrac 2000 will take over the welding procedure. The permanent built-in magnet, which can be switched on/off, holds the tractor in the correct position on the workpiece. The lightweight trolley has four-wheel drive to ensure smooth and steady welding travel.

The Miggytrac 2000 has a digital display to permit simple programming. It is very easy to move the trolley from one welding task to the next.

Miggytrac 3000

The Miggytrac 3000 is designed to be used together with ESAB's semi-automatic power sources.

The Miggytrac 3000 is a small, compact, motor-powered tractor with integrated wire feed and water-cooled welding torch, designed for horizontal MIG/MAG welding of plates and beams. Miggytrac 3000 is provided with four-wheel drive. The carriage follows the weld joint by means of one front and one rear guide wheel. The wheels are adjusted so as to make the carriage travel diagonally towards the flange or stiffener to be welded.

A2 Multitrac with A2/A6 process controller PEK

The A2 Multitrac with the A2/A6 process controller PEK is available for both the SAW and the GMAW method.

If the SAW-version is chosen, the A2 Multitrac is capable of working equally well with either single or twin wire.

The feed unit secures an even and stable wire-feed speed. Accurate travel speed is ensured by means of four-wheel drive. Exact presetting and control of the welding parameters is done on the instrument panel, which is equipped with a digital display. The Multitrac is fully mobile and can easily be moved from one welding station to another. It can also be quickly set-up for different workpieces.

A2 Multitrac with A2 process controller PEI

The A2 Multitrac with the process controller PEI is available for both the SAW and the GMAW method.

If the SAW-version is chosen, the A2 Multitrac is capable of working equally well with either single or twin wire.

The feed unit secures an even and stable wire-feed speed. Accurate travel speed is ensured by means of four-wheel drive. The control equipment is very easy to use with a minimum of training. The welding parameters are adjusted by turning knobs and the actual parameters are shown on the digital displays. The Multitrac is fully mobile and can easily be moved from one welding station to another. It can also be quickly set-up for different workpieces.

Welding automation

Tractor automats

A2 Tripletrac

The A2 Tripletrac is superb for internal circumferential welding of large cylindrical objects due to its clever design with a steering wheel. The tractor can be equipped with ESAB's A2-A6 Process Controller PEK or A2 Welding Controller PEI.

The A2 Tripletrac's three-wheeled tractor carriage steers with the front wheel. This, combined with the fact that the steering wheel also controls the horizontal slide, ensures easy control of the wire position. This makes the A2 Tripletrac ideal for internal circumferential welding of large cylindrical objects that are rotating on a roller bed, for example pressure vessels and wind towers.

The compact, efficient design makes it easy to move the A2 Tripletrac from one place to another, such as between different welding workpieces. The carriage is equipped with a handle to disengage the gear, so the A2 Tripletrac can easily be pushed to another place.

A6 Mastertrac

The A6 Mastertrac is a heavily-dimensioned self-propelled, four-wheel drive, automatic welding machine. The advanced electronic control equipment provides high precision and the digital display enables all the welding parameters to be preset accurately – either beforehand or during welding. The A6 Mastertrac is easy to use and once it is running, it requires only the supervision of the operator. The automat can be supplied for SAW in single, twin or tandem version. Also available for GMAW.

The picture shows A6 Mastertrac Tandem.

A6-DK

The A6-DK welding machine has two welding heads. It is built up by components from the well-known A6 system. A6-DK is designed for simultaneously welding horizontal-vertical fillets on both sides of a web or through panels.

A6-DK straddles work pieces up to 800 mm high and with a symmetrical profile of 400 mm. A6-DK travels directly on the work piece and is guided along the joint with the aid of a guide unit attached to the contact unit. The travel speed is steplessly adjustable from 0.15 to 2.0 m/min.

Welding automation

Storage and tank welder

AGW1 and AGW2 Single-side & Double-side tank welder

AGW1 and AGW2 Tank Welder is a series of self-propelled 3 o'clock welding equipment primarily developed for on-site erection of large storage tanks, silos, blast furnaces and similar cylindrical objects. It is available as a single-side version and a double-side version. Usually it is designed to travel on the top edge of the tank shell.

As there are different ways of building tanks, one machine in the series is designed to travel on a rail which is temporarily fixed to the shell or on a stand-alone ring outside the shell.

Operator safety CE approved

The operator of each machine (if a double-side version) rides in a cabin, where he supervises and controls the welding process with the control panel within easy reach.

For weather protection the cage can be covered by curtains. The cabin of a double-side machine is equipped with step ladders and a joining bridge at the top to facilitate for the operators to climb onboard. The bridge also has guard rails for the safety of the operators.

For more information, please contact your nearest ESAB representative.

Welding automation

Welding heads

A2 S Mini Master

The A2 S Mini Master represents an automatic welding system designed with the emphasis on low weight, compactness and flexible use. The system is built around basic units. The degree of automation and process orientation of the basic unit you choose can be expanded or modified as required, depending on the application. Appropriate welding heads can be combined with suitable manipulators, which results in a total solution to a specific welding problem.

A2 S GMAW Mini Master

The A2 S GMAW Mini Master is a compact MIG/MAG version of the A2 S SAW Mini Master welding head. The GMAW welding head is equipped with an MTW 600 welding torch, which is specially designed for use where an automatic MIG/MAG welding torch is required for heavy-duty use. The very effective "whirlcool liquid cooling system" is integrated in both the contact tube and the outer jacket of the torch for maximum cooling effect. All connections are positioned in the upper end of the torch to facilitate the mounting of the necessary supply and to protect the connection from welding arc radiation.

A6 S Arc Master

The A6S Arc Master is the complete system for heavy production welding offering flexibility, operational reliability and durability. It constitutes the base of ESAB's automatic welding program with an extensive modular and component system. It is available in a number of standard models and can be adapted to suit the customer's specific demands.

From an existing model, the A6 S can be rebuilt and extended to the required automation level, by means of positioning, joint tracking, flux handling and so on, as the requirements change.

Welding heads/Power sources

A6 S Compact

The A6 S Compact 300/500/700 are three reliable members of the A6 family for the efficient, high-productivity SAW method. These welding heads make it possible to build highly-efficient stations for the internal longitudinal welding of butt joints inside tubes in different versions for tubes down to dia 300 mm. TV-monitoring equipment can be integrated into the system, thereby enabling the operator to supervise and adjust the head position from the outside via the TV -screen.

TAF 801 and 1251

The AC power sources TAF 801 and TAF 1251 are using a unique square wave technology suitable for a wide range of AC welding applications.

- Capacity for continuous welding
- Pre-setting of arc voltage
- Reliable square wave striking
- Arc voltage or current feed back
- Optimized open circuit voltage
- Compensation of mains voltage fluctuation
- Voltage drop compensation for long welding cables
- High power factor ensuring low power consumption
- Designed and built for convenient servicing
- Safety control voltage 42V
- Prepared for Scott connection of two power sources

	TAF 801	TAF 1251

Welding automation

Power sources

LAF 631, 1001, 1251 and 1601

The LAF series are three phase, fan-cooled DC welding power sources designed for high productivity mechanized submerged or high productivity MIG/MAG arc welding.

They are used in combination with ESAB's A2-A6 equipment range and the A2-A6 Process Controllers (PEK or PEI).

Welding automation

Carriers and gantries

A2/A6 Beam-travelling carriage

For many applications, a beam-mounted carriage, fitted with an A2 or A6 welding head, is the ideal solution for submerged arc and gas metal arc welding. The beam-bound carriage has a robust, cast-metal chassis with the opportunity to mount a standard A2S or A6S welding head.

A2/A6 Beam-travelling carriage

MechTrac 1730, 2100, 2500 and 3000

MechTrac might very well be the most flexible and fastest way to increase your productivity. The MechTrac is built as a gantry and can be equipped with an A2 welding equipment for SAW or MIG/MAG to create a complete welding station. If the workpiece rotates, other welding methods such as TIG and Plasma can be used, depending on the application and handling equipment. The MechTrac unit is suitable for different types of workpieces that can be covered by a gantry. The gantry offers the possibility to weld profiles such as I-, T-, or L-beams, columns or tapered beams. The MechTrac is available in four versions, depending on the size of the workpiece. The difference is the width of the gantry – 1730 mm, 2100 mm, 2500 mm or 3000 mm between the legs.

The length of the legs is the same for all types, 1500 mm from the top of the rail to the inside of the overhead beam.

The gantry can support a maximum weight of 220 kg, corresponding to a maximum of two A2 welding heads (single or twin wire) complete with automatic joint tracking GMH and an OPC flux recovery unit.

The picture shows MechTrac equipped with A2 welding heads, Process Controller PEK and Power sources LAF 631.

MechTrac 1730, 2100, 2500 and 3000

Welding automation

Carriers and gantries

Walltrac

This column and boom welding station is designed for the production of various beam structures, such as I/H and box beams of tapered and non-symmetrical designs, stiffener sections and the joining of plates and sections. The flexible solution also permits quite a number of other applications to improve productivity and weld quality.

The wall-supported manipulator travelling on a single rail is designed for rack-and-pinion drive from the floor-mounted rail. An idler wheel support mounted on the column allows the manipulator to travel on a rail support.

To ensure a uniform, stable welding speed, the bogie carriage is equipped with two parallel-connected DC motors. The fixed boom, which has rails and a rack, is equipped with two motorised side-running welding carriages, each carrying a twin-wire sub-arc-welding head. Each welding head is fitted to a servo-controlled slide which is cross mounted on the carriage via a manually-adjusted vertical boom. Transverse welding with the speed generated from the side-running carriage is possible, using the outer welding head.

The well-proven A6 welding heads incorporating the user-friendly, microprocessor based PEK are a combination which safely secures the welding process. Automatic joint tracking GMH controls the vertical and horizontal axes, i.e. the slides and the carriages, to safeguard the superior weld quality.

Advantages: Minimal floor working area thanks to the single rail/wall support. Longitudinal and transverse welding procedures can be used. A large number of positioning axes permit flexible welding production.

Ordering information

For ordering information please contact your nearest ESAB representative.

Gantrac

This gantry has rigid legs supported by tacho-controlled bogie carriages with cable chains to ensure a uniform, stable welding speed. The two legs support the gantry beam, which is equipped with guides and a rack for the two motorised welding carriages. The operator can easily control the welding procedure from the platform mounted on one of the bogie carriages. All in all, this is a very sturdy and reliable manipulator solution.

The well-proven A6 welding heads are mounted on rack-and-pinion slides with comprehensive working strokes to obtain good access to the workpieces. Incorporating the user-friendly, microprocessor-based PEK, the welding process is safely secured. Automatic joint tracking GMH controls the vertical and horizontal axes, i.e. the slides and the carriages, to safeguard the superior weld quality.

Submerged arc welding is the superior method for the applications intended for this station.

The flux-handling equipment can be operated conveniently, without time-wasting interruptions. At the same time as flux consumption is reduced, the workplace is kept clean and free from flux spillage.

Advantages: Highly stabilised manipulation of welding torches with optimised welding results.

A large number of positioning axes permit flexible beam production.

A6 synergic cold wire

The ESAB A6 – SCW SAW process

The ESAB A6-SCW kit offers a unique opportunity to increase the productivity by boosting the deposition rate. The cold wire is fed in synergy with the arc wire into a weld pool where it melts. This means that the arc and cold wire ratio always remains constant after a suitable wire diameter is selected. The chemistry of the weld and the deposition rate is controlled and pre-selected. It is easy for the operator to use as no additional control unit or separate feed device is needed.

The SCW process can be used in an endless variety of combinations with solid and/or cored wires, single, twin, tandem, and multiple wire applications and so on. It can also be used in surfacing applications with cored/solid wires such as concast rollers or built-up, large-diameter engine pistons. The cold wire has no arc and therefore carries no restrictions when it comes to incorporating “hard to weld” alloys in cored wires.

The cold wire kit is suitable for all ESAB's new and existing A6 systems and can be installed in a few minutes.

Ordering information

For ordering information please contact your nearest ESAB representative

Slides

For the accurate and comfortable positioning of the welding head in the joint, the robust A2 and A6 slides are available in a series of standard lengths for any mounting position.

The A2 linear slides have a compact box profile and adjustable guides, which form a light and plain slide. The A6 linear slide is a flexible component and, with its high loading capacity, it can be freely mounted for positioning the A6 welding head. The A6 linear slide can also be supplied with an extended runner which increases loading capacity by 25%.

The A6 servo slide is primarily intended for use in connection with positioning and joint tracking. It can be operated jointly with other A6 components, such as rotary slides for the rotation of the welding head in the joint. These servo slides are normal supplementary units for our standard joint tracking systems, like the A6.

The ORB 40 is a rotary slide for the A2 welding head. It has a lockable rotary slide and compact design with a divided clamp. The A6 rotary slide with worm gear is used when the electrode angle requires frequent adjustment in relation to the joint. These adjustments can be made continuously from 0-360° using the hand-wheel. The A6 rotary ball bearing slide is another type designed for heavier loads. The rotary ball bearing disc can be rotated 360° and locked by a lever.

Welding automation

Components and modules

Wire feed units

The ESAB A2/A6 system comprises different wire feed units; A2 SAW, A2 GMAW, A6 SAW and A6 GMAW.

The A2 wire feed unit is designed for small wire Submerged Arc welding (SAW) or Gas Metal Arc welding (GMAW) while operating in confined spaces.

The A2 SAW wire feed unit can be used for single or twin-wire welding. The A6 SAW wire feed unit is designed for heavy-duty welding. The wire feed unit is the standard base in most SAW automatics in the heavy production industry. You can use single or twin wire, strip cladding or arc-air gouging. The A6 GMAW wire feed unit is specially designed for the mechanisation of MIG/MAG welding in steel and aluminium. The GMAW version is robust equipment for heavy-production welding. It has a water-cooled torch mounted directly on the feed unit.

A2-A6 Process Controller PEK

A2-A6 Process Controller PEK can be used with CAN controlled ESAB's power sources and motors. It is prepared for Submerged Arc Welding, Gas Metal Arc Welding and Arc gouging.

- Clear text menus for user friendliness
- CAN Bus controlled
- Selectable welding process
- Pre-setting of all welding parameters
- Memory for 255 parameter sets
- Constant current (CA) or constant wire speed (CW)
- Heat input visible on display
- Encoder controlled motors for top performance motion control
- USB slot for data backup and transfer
- Used welding parameters can be stored directly on a USB memory stick
- Data transfer to and from PC/LAN
- Documentation of used welding parameters on PC or through LAN with WeldPoint™

A2 process controller PEI

The A2 process controller PEI is a control system for ESAB A2 tractors and A2 welding heads. The controller is connected to the power source by a control cable and can be connected to the ESAB LAF 631 and 1001.

The A2 process controller PEI is suitable for both submerged arc welding and gas metal arc welding. The control system is very easy to use with a minimum of training.

A2 process controller PEI

Enclosure class, protection	IP 23
External dimensions, LxWxH, mm	197x227x220
Mains supply, V/Hz	42 (AC)/50-60
Weight, kg	6.2
Max power consumption, VA	700

Positioning and joint tracking system

The high-precision, heavy-duty A6 servo slide forms an important part of ESAB's automatic welding program. The slide is primarily intended for use in connection with positioning and joint tracking. Depending on the desired function and the work to be performed, the slide can be combined with two different control systems: PAV or GMH. The PAV is a manual, servo-assisted, joystick-controlled positioning and joint-tracking system for one or two slides. The GMH automatic joint-tracking system covers a wide range of applications and provides convenient handling. The basic function of the GMH is to correct irregularities in weld joints and to track simple workpiece geometries. You can also use sensor fingers with the GMH system to eliminate parallax faults.

Welding automation

Flux equipment

OPC Basic & Super flux equipment

ESAB has a number of different flux equipment/systems to combine with our automatic submerged arc welding equipment. The OPC flux recovery units have a robust, compact design – easy to fit and easy to use. They can be fitted equally well to A2 and A6 equipment, both stationary or travelling. The OPC Basic recovery unit works on the ejector principle using compressed air.

Like the OPC Basic, the OPC Super recovery unit has been developed for use in a demanding working environment and on heavy-duty jobs. The OPC Super, with its stronger ejector and cyclone, produces higher suction height than the Basic. The OPC Super can also be used with pre-heated flux, as it is heat enforced.

There are three filter types for cleaning used air. A filter bag is used for A2 tractors and light-duty welding applications. A cyclone filter with a filter bag is a solution for most A2/A6 subarc welding. The Tedak filter is for heavy-duty and continuous welding applications.

To upgrade this system to a system for heavy continuous welding, add the FFS flux-feed system, and create the FFRS Basic & Super Flux system. For more information, see the leaflet entitled "FFRS – Basic & Super".

Technical data

OPC recovery unit Basic

Air-flow capacity at working pressure 0.6 MPa: 250 lit/min

Max suction height at working pressure 0.6 MPa: 0.8 m

OPC recovery unit Super

Air-flow capacity at working pressure 0.6 MPa: 580 lit/min

Max suction height at working pressure 0.6 MPa: 1.4 m

FFRS Basic & Super flux equipment

The FFRS system is designed for continuous, high-capacity welding operations. It is ideal for long runs and mass production. The system is built on two different modules: the OPC Basic and Super, which are based on the ejector principle. The Basic type is for normal welding operation. The Super is used with increased flux bead and heat conditions.

FFRS – Basic & Super

These are recirculated systems for continuous Submerged Arc Welding. FFRS Basic/Super are complete equipment combining the effective recovery of flux with OPC Basic/Super systems and flux feed to the flux hopper with the well-known flux tank TPC 75. Added to ordering data is inlet pipe type, straight or bent, for easy connection to standard delivered aluminium hopper.

The system FFRS Basic and Super are built up from variants of OPC Basic/Super and Flux feed system FFS. The FFS comprises of a flux tank TPC with different inlets for the 6 and 10-litre flux hopper.

The system of FFS consists of:

Air flux feed tank TPC 75

Plastic hose 1" for flux, 30 meter

Inlet to flux hopper

Included in the package is an instruction of how to install inlet in hopper with drilling data.

Ordering information

FFS (straight inlet)	0806 697 887
FFS (bent inlet)	0806 697 886

Welding automation

Flux equipment

FFRS 1200 & 3000 flux equipment

The FFRS system is designed for continuous, high-capacity submerged arc welding operations. It is ideal for long runs and mass production. The FFRS 1200 & 3000 are based on an electric suction unit creating a vacuum, which is the alternative when extra high recovery force is required. In confined areas, they are the ideal flux-handling equipment. On the FFRS 1200 and 3000, there is an electrically-powered recovery unit. The recovered flux is cleaned from dust and slag in the pre-separator and passed back to the pressure tank for re-use. On the FFRS 1200, the power is 1200 W and, on the FFRS 3000, it is 3.000 W. The FFRS 1200/3000 is a flux feed and recovery system for heavy production SAW stations or submerged arc welding in confined spaces.

CRE 30/60 air-drying units

- Reduces the risk of hydrogen cracking
- Built-in monitor – warns if the pre-set humidity is exceeded
- Reduces condensation – less corrosion and malfunction

The A6 CRE 30/60 air-drying units are designed for use with the ESAB flux handling system. The air-drying units work on the adsorption principle and is reactivated cold.

Most industries use compressed air as an energy source for many processes. For most of them, humidity is of no importance. The welding industry uses compressed air to transport flux for submerged arc welding. The necessity to keep these consumables dry is well known. The need to keep the humidity in the air at a low level is of the same importance as all the other precautions that are taken in a weld shop to limit the risk of hydrogen cracking.

The CRE 30/60 are air dryers for compressed air. It connects to the normal air distribution system at a plant. The capacity is sufficient to handle a delivery/recovery system for SAW. Thirty normal cubic metres per hour is the capacity at rated input for CRE 30. For CRE 60 the capacity is sixty normal cubic metres per hour.

The CRE 30/60 reduces the condensation of water in pneumatic systems and thereby reduces corrosion and malfunction.

Another advantage is the built-in monitor that emits a warning if the pre-set dewpoint of the air is exceeded.

Welding automation

Column and boom

CaB 300/460 S

CaB 300 S

The CaB 300 S (standard) column and boom can reach over distances of 3 to 5 m both vertically and horizontally. The 180° column rotation facility provides a total action radius. The 4x4 size is capable of 150 kg load at the end of the boom. The A2 and A6 welding systems are easily combined with the CaB 300 S.

CaB 460 S

The CaB 460 S (standard) column and boom can reach over distances of 5 to 7 m both vertically and horizontally. The 180° column rotation facility provides a total action radius. The 6x4 size is capable of 350 kg load at the end of the rack and pinion driven boom. The A2 and A6 systems are easily combined with the CaB 460 S.

Station solution

Conventional column and boom with a movable boom and the welding head mounted at the end of the boom.

CaB 300/460/600 M

A modular range of column and booms, available in three load sizes. The modular system gives possibilities to configure a range of different welding station solutions that can fulfill most common welding applications.

Due to modularity and the fixed configuration possibilities the lead times for delivery can be kept at a minimum.

Station solution

Conventional column and boom with a movable boom and the welding head mounted at the end of the boom. Cable chains are included

Welding automation

Column and boom

CaB 300/460/600 C

A customized range of welding column and booms are available for different customer requirements and applications, with loading capacities and working strokes for utmost accessibility to the welding joints.

Based on the modular CaB range, solutions to meet the most demanding request can be achieved. Welding methods as TIG, plasma welding and SAW cladding as well as Narrow Gap can be chosen on customized stations.

We can offer four basic stations with numerous alternatives.

Station solution 1 is a conventional column and boom with a movable boom and the welding head mounted at the end of the boom.

Station solution 2 is a conventional column and boom, with a movable boom and one welding head mounted at the end, combined with a boom-carriage-mounted welding head. (Not CaB 300).

Station solution 3 side-boom manipulator with one or two welding heads. This welding station with 5-axes movement is the basic unit for welding girders and profiles and for joining plates and sections.

Station solution 4 is a side-boom manipulator with a double track boom. The welding heads are placed on each side of the boom. The boom carriages can be individually controlled by the joint tracking systems, on separate tracks. Positioning from the rail carriage helps to create a highly-efficient welding station for the transversal, double fillet welding of stiffeners, for example.

Welding automation

Column and boom

Telbo™ 9500

Telbo™ a giant innovative step towards highly productive automatic welding. Saving valuable workshop space by means of the unique 3-section telescope-like retraction of the boom and securing the safety of operator.

Outstanding 12 m reach-out with boom end loading capacity of heavy 500 kg with capacity to ensure superior productivity and quality of weld.

Telbo™ is ideal for internal /external circumferential welding of windtower applications.

Flexible production is the lodestar, no matter if mixed sizes and plate thicknesses are to be welded – productive results are obvious.

Loaded with 1000 kg Flux BigBag and 1000 kg Wire EcoCoils, welding is continuously performed and costly dwell times are minimized.

Features:

- PLC Control system for synchronized boom motion
- Automatic "Wind Back" of wire during boom retraction
- Telescopic wire guides
- Remote controlled flux nozzle
- Remote controlled height adjustment of joint tracking sensor
- Saving in Factory-floor foot print
- Increased workshop safety
- Enables flexible production
- Big Pack" handling concepts
- Camera supervision system (option)

Applications:

- Power generation, especially wind tower manufacturing lines
- Pipeline, pipe mill contractors
- General fabrication (small workshops with limited space)

Effective work range, m	9.5
Max reach out, m	12.5 *)

Column and boom

CaB 2200

- The Column & Boom CaB 2200 is purposely designed for light duty.
- A smooth 360-degree lockable rotation.
- Linear guidings on column and boom for smooth movement which makes it ideal for the MIG, TIG and SAW welding processes.
- Cable chain on column and boom.
- Movable carriage or fixed stand
- IP 55 pendant control station using low voltage on the generous 10 metre cable.
- A standard safety feature including anti-fall device and limit switches for all motions.
- Pay load of 70 kg.

Welding automation

Handling equipment

Roller beds

Roller beds are designed to enable large round items to be welded and handled during rotation welding for example. ESAB offers a large range of roller beds of different models and load possibilities. The range partly consists of conventional roller beds, where the operator manually and mechanically sets the distance between the rollers to different diameters – and partly self-adjusting roller beds, where the rollers automatically adjust themselves to the diameter of the workpiece. All roller beds are designed to be easily combined with ESAB A2/A6 program and can be controlled via a remote control unit or from the process controller PEK.

CD 5-120 and CI 5-120, conventional roller beds with rail bogie. Max loading capacity from 2.5 – 60 tons/section.

CD-30/60/100/120-DB and CI-30&0/100/120-IB, conventional roller beds with rail bogie. Max loading capacity from 15 – 60 tons/section.

FIR 35, 75 and 100. These units are part of a growing line and used especially in wind tower production. Max loading capacity 35, 75 or 100 tons.

FIT 30, 60 and 100, conventional idler roller beds with built-in hydraulic height adjustment. These units are part of a growing line and used especially in wind tower production. Max loading capacity 15, 30 or 50 tons.

FUB 30, complete unit for fit-up of section. One set of FUB consist of one power and one idler roller bed 30T. four independently adjusted rollers to align the two sections with each other. Max loading capacity 30 tons.

SD 5-100 and SI 5-100, self-aligning roller beds. Motorised and idler rail bogie versions. Max loading capacity 2.5 – 50 tons/section.

SD 5-100 DB and SI 5-100 IB, self-aligning roller beds. Motorised and idler rail bogie versions. Max loading capacity 2.5 – 50 tons/section.

Suitable application areas:

- Wind tower fabrication
- Offshore and shipyards
- Pressure vessels
- Pipelines

Versatile accessories

A wide range of accessories is available for ESAB's roller beds, which additionally improve workpiece handling during welding.

For more information, please contact your nearest ESAB representative.

Welding automation

Handling equipment

Positioners

Welding times can be drastically reduced by placing the workpiece on a positioner when welding. Up to 25 – 30 % higher welding speed can be achieved if the joint is welded lying down instead of vertically. The optimum welding position can always be obtained with ESAB's positioners.

Welding in the optimum position improves the welding quality as welding work becomes considerably easier for the welder to carry out in a safer way. The arc time factor also increases when welding in the positioner, especially when working on large, heavy workpieces. The changes in position of the workpiece is reduced to a minimum in comparison to using a spindle guide or other lifting tool, which often means unproductive waiting times.

ESAB has a wide program range of positioners for welding and these can also be used for installation work. During automated welding, a positioner is often a part of the total application and all the models are fully designed to be combined with ESAB's automation program, which means that they can be controlled remotely or connected by the application's process controller PEK.

Depending on the size, weight and complexity of the workpiece and position angle requirements, the following ESAB positioners are available:

RT 250 – RT 500

Two axis positioners for rotating and tilting lightweight workpieces. Maximum loading capacity from 250 to 500 kg.

RT 1 – RT 35

Two axis positioners for rotating and tilting workpieces. Maximum loading capacity from 1000-35000 kg.

The positioners of the RT-series have 2 axis; height and rotation, which give a perfect ergonomic working position.

All the positioners come with a low voltage (24V) remote control for all functions. For daily work these positioners offer perfect solutions with optimized motor and gear drive sizes.

TAP 1T and TAP 3T

Three axis positioners for lifting, rotating and tilting demanding workpieces. The positioners of the TAP-series have 3 axis; height, tilting angle and rotation. Thus 3-axis operation guarantees the ideal ergonomic working position. Height, angle and speed are continuously adjustable.

Suitable application areas:

- Pipe shops
- Vessels
- Cladding of dish ends
- Fuel tanks

Versatile accessories

A wide range of accessories is available for ESAB's positioners, which additionally improve workpiece handling during welding.

For more information, please contact your nearest ESAB representative.

Welding automation

Engineering, Arc welding

Welding solutions for Pipemills

ESAB is a complete, reliable partner for pipemill welding. Not only do we have in-depth experience of demanding multi-wire submerged-arc welding. We also have a comprehensive range of products for this type of production.

Flexible, reliable welding equipment

We have a wide range of products developed in house for various multi-wire SAW applications which are particularly suitable for pipe welding. The range includes AC-DC power sources in the Pipemill Edition, controls for multi-wire processes including documentation, as well as columns and booms with a wide variety of welding heads.

Precise, high-speed longitudinal welding

Our concept for longitudinal submerged-arc welding is suitable for pipes in a normal diameter range of 20-64", a normal wall thickness of 6 to 40 mm and a length of up to 18 m.

Internal and external welding

For internal welding we have designed pre-stressed booms as well as welding heads for up to four wires. During internal welding, front-mounted laser sensor guides the welding head via the cross-slide. Video camera observation of accurate guiding and the welding process is standard.

The external welding station is based on a column and boom solution with a very stable cross-slide to adapt to different pipe diameters. The actual welding head, with its up to five-wire feed systems mounted on a so-called "rainbow fixture", is based on the ESAB A6S-Arc Master System which has been tested more than 10.000 times.

Return current systems (Grounding)

High current circuits have to be closed back to the power source by efficient systems at constantly moving pipes. Flexible steel brushes in two rows in front and behind the welding process are pressed with defined force from outside to the pipe to catch the current with a minimum of Voltage loss and to surely avoid any arc blow effect, which would disturb the weld process.

Problem-free flux and wire feed systems

We offer the smooth feeding of wire in different diameters and the equally straightforward supply of new and re-used flux.

The constant and reliable wire feed is secured by high torque wire feed motors and enclosed double wire straightening mounted in 90 degrees to each other.

The correct combination of compressed air, flux feeding, easy replenishment of new flux via the Big/Bag system, a vacuum unit, a reliable magnetic separator and continuous recovery helps to create welding stations with less downtime, high-quality welds and, last but not least, a cleaner working environment.

Spiral pipe welding

Many end users require spiral-welded pipes for different purposes, such as water pipes. Normally, the wall thickness is limited to 25 mm, but the diameter range can be up to roughly 2.5 m. As in longitudinal pipe welding solutions, an internal welding head mounted on a long boom and an outside head mounted on a column and boom are used for offline spiral pipe welding.

However, this is the only similarity.

First of all, internal and external welding is performed at one and the same station. Internal welding starts first and, after half a turn, external welding then begins – internally with two or in some cases three wires and externally with one or three wires in the welding process, depending on the diameter and wall thickness of the pipe.

Engineering

Beam welding

ESAB has more than 30 years' experience in the field of beam and profile welding. ESAB's beam and profile machines are equipped with the well-known and well-proven ESAB A6 system welding equipment.

ESAB offers you a complete and effective way of welding beams and profiles. Whether you weld I-, T- or L-beams, wide flange beams, columns, tapered beams or non-symmetrical beams, ESAB has the know-how and the welding equipment to match your efficiency, quality, precision, versatility, productivity and overall welding economy requirements.

The machines are of two types: IT-machines, where the beams are welded with the web unit in the vertical position, and I-machines, where the beams are produced in the horizontal position.

The main advantage of both machine types, apart from their high production capacity, is that the welding operation takes place when the flange and the web are pressed together under pressure in order completely to eliminate the gap between the surfaces. This ensures perfect weld quality.

The IT-machines have a built-in straightening device which compensates for the pull-back of the flanges (see picture).

ESAB's beam-welding machine program gives you the opportunity to choose the right type of equipment for your particular type of production.

Total range of beam sizes that can be welded:

Machine type	Web	Flange
IT-258	200-2500 mm	100-800 mm
IT-158	200-1500 mm	100-800 mm

Straightening principle

Examples of beams that can be welded

Welding automation

Friction Stir welding

ESAB Friction Stir Welding

ESAB has extended its product programme to include machines for the Friction Stir Welding method (FSW). This method has been developed and patented by TWI in the UK.

The FSW method is based on the principle of obtaining sufficiently high temperatures to forge two aluminium components, using a rotating tool that moves along the joint.

Using the FSW method, aluminium components are joined together without increasing the temperature above melting point.

The Friction Stir Welding of aluminium has been shown to produce joints with high-strength values and without inclusions and impurities.

Bending tests and tensile tests have been conducted with superb results. The fatigue properties are outstanding compared with other welding methods.

Furthermore, the joint is almost free from stress and has a perfect root surface when welded from one side. This results in a minimum of supplementary work.

Friction Stir Welding is ideal for joining straight profiles and flat plates with a thickness of 1.2-25 mm. When welding materials with a thickness of more than 15 mm, the welding is done from both sides. The maximum thickness is around 60 mm at 100% penetration.

Suitable application areas:

- Shipbuilding
- Offshore platforms
- Aerospace industry
- Railway wagons, trams, underground train carriages
- Automotive industry
- Production of electric motors
- Defence industry
- Cooling elements
- Basically all aluminium, copper and magnesium alloys can be friction stir welded with high quality and speed.

ESAB LEGIO™

The ESAB LEGIO™ concept combines the latest technology with proven quality. The modular system makes it possible to assemble welding stations to suit the most varied friction stir welding applications.

The LEGIO™ system consists of five basic designs in a series of seven sizes, covering a welding depth of 1.2 mm to 60 mm. These basic types can be supplemented with different types of equipment to suit the most varied production needs and give maximum flexibility to any production line.

The S- and the U-models are designed to be easily integrated with larger fixtures, rotary units and exchangeable clamping systems.

For the production of smaller workpieces, the UT- and the ST-model are the most suitable. They have tables prepared with a hole pattern, where fixtures can be attached.

ESAB SuperStir™

The ESAB SuperStir™ programme includes a variety of machines developed from a standardized ESAB SuperStir™ base unit and with working ranges of 0.5 x 1.5 m up to 10x20 m within the same concept.

The programme also includes customized models of different designs to meet our customers' specifications in their different production areas.

These different designs are today used worldwide in R&D centers, in joining of extrusions to panels, in production of pressure vessels as well as small parts for the automotive and electronic industries etc.

Welding automation

Friction Stir welding

Rosio™ Friction Stir Welding Robot

Friction Stir Welding Robot for welding of challenging joints
The ESAB Friction Stir Welding robot system enables flexible joining of complex structures, preferably in Aluminium. The ability to perform welds in an arbitrary direction of a 3-dimensional workspace increases the possibilities of usage for new challenging FSW applications.

The FSW method's benefits:

- Reliable and uniform high weld quality
- Unbeatable strength
- High productivity
- Low distortion and shrinkage
- Minimum of supplementary work
- Low energy consumption
- Environment friendly

Flash butt welding

ESAB manufacture a complete series of flash butt welding machines for different welding objects with a welding area of 500 mm² up to 30,000 mm².

The flash butt welding technique is especially convenient and profitable for precision and mass production work as it permits a high level of mechanization and automation of the manufacturing process.

World leader in welding and cutting technology and systems.

ESAB operates at the forefront of welding and cutting technology. Over one hundred years of continuous improvement in products and processes enables us to meet the challenges of technological advance in every sector in which ESAB operates.

Quality and environment standards

Quality, the environment and safety are three key areas of focus. ESAB is one of few international companies to have obtained the ISO 14001 and OHSAS 18001 standards in Environmental,

Health & Safety Management Systems across all our global manufacturing facilities.

At ESAB, quality is an ongoing process that is at the heart of all our production processes and facilities worldwide. Multinational manufacturing, local representation and an international network of independent distributors brings the benefits of ESAB quality and unrivalled expertise in materials and processes within reach of all our customers, wherever they are located.

ESAB Sales and Support Offices worldwide

* Includes manufacturing facilities of ESAB North America.
A wholly owned subsidiary of Anderson Group Inc.

XA00151420 ESAB reserves the right to alter specifications without prior notice.
